The new Congress showed its gratitude to Santa Anna by voting him the titles of "Liberator of the Republic" and Conqueror of the Spaniards," and, on March 30, 1833, elected him president. The radical Valentin Gomez Farias was elected vice president. But Santa Anna, who detested the dull routine of government, pleaded ill health and left the Poder Ejecutivo to handwritten line between Gomez Farias. The liberal leader was fifty-two years old at the time. He had studied medicine and political science, and was a tremendous anticlerical.

Description: The liberal authors of the Constitution of 1824 took it for granted that everything in the Spanish system was had and that the only thing to do was to throw it all out and make a fresh start. They ignored the immense weight of three centuries of habit, and they chose to ignore also the fact the the old system, with all its faults, was a tried and working system, while the new Constitution erected a weak and unfamiliar government in a country ravaged by civil war and overrun by bandits; riveted upon it the tyranny of provincial caciques; allowed for no effective check on the Church or the army, which by that time was a privileged caste, infinitely more rapacious than anything seen in colonial times; and it imposed an uncomprehended democratic ideology upon a people who had known nothing but rule from above

If we listen to the other side, we are treated to the spectacle of a monster, a kind of Antichrist, whose diabolical genius aimed at the destruction of everything good and holy. He was a "bandit," a "murderer," an "atheist," and the betrayer of the "true" Mexico. The power of these myths, to evoke emotion and confuse thinking, is immense. Too much blood has been spilled to allow either side to treat Juarez as an understandable human being. I attempt it with some trepidation.

Description: Parenthesis in right margin by: Santa Anna heard his country's call. His return from Manga de Clavo was the occasion for a popular demonstration. More pronunciamientos demanded that he be named dictator. Santa Anna was puzzled. After twenty days in power he left the stew to cook a while longer and went back to Manga de Clavo. The liberal Congress also made a bid for the support of the Illustrious Conqueror of the Spaniards by putting him in command of the government forces. But Santa Anna's actions were ambiguous. He allowed himself to be "taken prisoner" by the conservative General Mariano Arista, until he should consent to become "Supreme Dictator and Redeemer of Mexico." Gomez Farias managed by some miracle to put down the insurgents in the capital and generally showed more strength than Santa Anna had expected. So Santa Anna "escaped" from his captors and appeared before Congress, swearing "to defend the Constitution till death," and vowing that his hatred of tyranny was "eternal." Congress simply did not believe him. Meanwhile, the insurgents laid siege to Puebla, and Santa Anna met the challenge in his best style; "We march to bring aid to the brave sons of Puebla who . . . are defending their sacred walls with a valor worthy of being perpetuated in the annals of our history!"

Description: Bracket in right margin by: The men married to Indian women - squawmen, as they were contemptuously called - suffered most, and, strange to say, the wives of the newcomers, not the men, were their bitterest enemies. They forbade their childern to associate with the half-breed children, and at school the position of the latter was unbearable. The white ones beat them and called them opprobrious names. This hatred of the squawman was even carried into politics.

"He's goin' home," said Sorrel Horse, "and he's goin' to be a good, quiet little boy ever after." "And go to church," said Berry. "And walk the straight and narrer path, world without end, and so forth," Sorrel Horse concluded. "Well, you see how it is," I said. "I've got to go - much as I would like to remain here with you; I simply must go." "Yes," Berry acquiesced; "you have to go all right - but you'll come back, and sooner than you think. These plains and mountains, the free life you have, and they'll never let go. I've been back there myself; went to school there, and all the time old Montana kept calling me, and I never felt right until I saw the sun shining on her bare plains once more and the Rockies looming up sharp and clear in the distance."

In the days of the Indians' dire extremity, they gave them all they could, and were content so long as there remained a little bacon and flour for their families; and some days there was not even that in the houses of some of them, for they had given their all. With the Indian they starved for a time, perchance. Scattered here and there upon the reservation, they built for themselves neat homes and corrals, and fenced their hay lands, all of which was an object lesson to the Indian.**

Here walked, and fed, and played, and rested deer and elk; here a bear prowled around, turning over logs and stones. There were tracks of wolf, and coyote, and bobcat and fox, each hunting in his own way for something with which to fill his belly.**

Summary

Science Magazine January 19, 1973 Article requested by Ted via Lewis & Clark Library interlibrary loan on 03/11/1988. Author writes about if sanity and insanity exsist, how shall we know them? How what is viewed as normal in one culture may be seen as quite aberrant in another. This article is an experiment of whether sane can be distinguished from the insane (and whether degrees of insanity can be distinguished from each other) This article describes such an experiment. Eight sane people gained secret admission to 12 different hospitals . This experiment covers their diagnostic experiences as well as their description of experiences in psychiatric institutions.

Book covers life under the protection of the big organization - the corporation, the government etc., Basically a study of society, the organization man, they are not the workers, nor are they the white-collar people in the usual clerk sense of the word. They are the ones that left home in our middle class, spiritually as well as physically, to take the vows of organization life.

I interpret it otherwise, to be aware of one's conformity is to be aware that there is some antithesis between oneself and the demands of the system. This does not itself stimulate independence, but it is a necessary condition of it; and contrasted with the wishful vision of total harmony now being touted, it demonstrates a pretty tough-minded grasp of reality.**

Description: Underlined with a big asterik: Fleeing before the march of Napoleon's armies the royal family of Portugal sought safety in Brazil. There it remained for thirteen years. And in this vast and empty land the transition from colony to kingdom and from kingdom to independent empire was a gradual process. There was no abrupt break with the colonial past, no prolonged and devastating civil war. When the royal family returned to Portugal to 1821, the heir to the crown of Portugal himself became the emperor of Brazil, endowed the country with its constitution, and secured its entry into the family of nations, and with the support of a powerful plantation aristocracy, the throne thus peacefully established survived for sixty-five years.

| Publisher: | **American Psychological Association, Inc.** | Year of Publication: | **1988** |

Summary

**Personality in Twins Reared Apart and Together by Tellegen, Lykken, Bouchard, Wilcox, Segal & Rich. Until recently, almost all knowledge regarding environmental and genetic causal influences on stable personality traits has come from studies of twins reared together. The findings have been remarkable and puzzling. Particularly puzzling, and contrary to what many psychologist would predict, is the finding that almost none of the environmental variance is due to sharing a common family environment.**

Juanita H. Williams, clinical psychologist examines the basis of women's behavior in a Biosocial Context. The historical aspects of the psychoanalytical works of Freud, his disciples, and his critics. Author also provides an ontogenetic analysis of the entire life cycle of women. The biological determinants of behavior, sex differences in infancy and early childhood. Also covers how children learn and how social influences seriously affect behavior. Subsequent chapters are concerned with the biological and psychological aspects of sexuality, birth control, reproduction and treatment of alternative lifestyles with a discussion on roles of housewife, and mother. The chapter on variations from the norm takes up not only female emotional disorders, but also delinquency, crime and a trenchant review of middle age and aging. The final chapter covers the major variables which determine the psychology of women-and of any particular women.

Summary **Skeptical Inquirer Winter 1987-88 volume 12, Author writes: What does it mean to say that something is "subliminal" or that it is "below threshold?" Does it mean that something is below the limits of concious perception?"(It does not!). A large body of research shows that the less likely we are to hear a given sound, the less likely it is to influence our behavior: even behavior as simple as saying, "Yes, I heard it." How much less likely that such a sound, can exert powerful or mysterious influences over us, as is claimed by proponents of subliminal influences!**

| Publisher: | **University of Minnesota, Minneapolis, MN** | Year of Publication: | |

Summary

**Minnesota Study of Twins Reared Apart by Bouchard, Lykken, McGue, Segal, Tellegen. Since 1979, a continuing study of Monozygotic and dizygotic twins separated at infancy and reared apart, has subjected more than 100 sets of reared-apart twins or triplets to a week of intensive psychological and physiological assessment. Like the prior, smaller studies of monozygotic twins reared apart, about 70% of the variance in IQ was found to be associated with genetic variation. The study focuses on the hypothesis that genetic differences affect psychological differences largely indirectly, by influencing the effective environment of the developing child. This evidence for the strong heritability of most psychological traits, sensibly construed, does not detract from the value or importance of parenting, education, and other propaedeutic interventions.**

Summary **The belief that advertisements contain hidden sexual and demonic images is widely held even though no evidence exists that such images are used or that they would be effective if they were. Creed analyzes Wilson Bryan Key's lectures and books saying that they are harmful in that he provides misinformation that in turn misdirects attention and promotes simplistic thinking. Key's thesis is that the "unconscious brain" perceives everything instantaneously as well as his conspirators/victims dichotomy reinforces a student's desire for simple explanations to complex thinking to retreat from the complexity of their college coursework to the comfort of right vs. wrong and obtaining certainty from authority.**

**Three Short Novels include Heart of Darkness, Youth, and Typhoon. In Heart of Darkness, is the story of the dissolution of a man and the system he stands for. The man is Kurtz, an ivory trader with a mission, and the system is the system of shameless exploitation which certain European powers imposed upon Africa. Youth is an odds-against story, the author early warns that the little 400-ton ship has only a slim chance of reaching her final destination. Typhoon takes place in the China Sea and when it hits, the demonic force of wind and water is horriffic. The storm is the protagonist and the story evolves as we watch its effect upon its victims.**
